This collection of information is required by 37 CFR 1.51. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 8 hours to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop Provisional Application, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

human synovial fluid while also generating clinically relevant results. These and other

22

objects and advantages of the present invention, as well as additional inventive features. 1 will be apparent from the description of the invention provided herein. 2 3 4 SUMMARY OF THE INVENTION 5 It is the object of the present invention to provide a fluid composition to be used in 6 simulating human synovial fluid during the tribological analysis of artificial joints. 7 8 It is another object of the present invention to provide a fluid composition possessing a 9 minimal influence on wear properties involved in the tribological analysis of artificial joints. 10 11 12 The present invention relates to a fluid composition comprising a serum, a synthetic 13 amino acid, and water. In one aspect of the present invention, it is contemplated that the 14 serum of the fluid composition is bovine calf serum. It is further contemplated that the 15 synthetic amino acid of the fluid composition comprises Ethylene-Diamine-Tetra-16 Acetate. 17 18 In another aspect the present invention relates to a fluid composition comprising a serum, 19 a fungicide and/or herbicide, and water. In one aspect of the present invention, it is contemplated that the serum of the fluid composition is bovine calf serum. It is further 20 21 contemplated that the antibiotic solution of the fluid composition comprises Sodium 22 Azide. In this aspect, it is still further contemplated that the fluid composition might

additionally comprise a synthetic amino acid. It is contemplated that the synthetic amino 1 2 acid of the fluid composition is Ethylene-Diamine-Tetra-Acetate. 3 In another aspect the present invention relates to a fluid composition comprising a serum, an antibiotic solution, and water. It is further contemplated that the antibiotic solution of 5 6 the fluid composition comprises Patricin. In this aspect, it is still further contemplated 7 that the fluid composition might additionally comprise a synthetic amino acid. It is 8 contemplated that the synthetic amino acid of the fluid composition is Ethylene-Diamine-9 Tetra-Acetate. 10 11 DETAILED DESCRIPTION OF THE INVENTION 12 The present invention encompasses a fluid composition comprising a serum, an antibiotic 13 or fungicide/herbicide, a chelating agent, and water. 14 15 In a first preferred embodiment of the present invention, the serum of the fluid 16 composition is bovine calf serum. In this embodiment, the chelating agent of the fluid 17 composition comprises Ethylene-Diamine-Tetraacetic Acid (EDTA). 18 19 The second embodiment further encompasses the fluid composition consisting essentially 20 of about 25.0% to about 99.8% bovine calf serum, about 0.1% to about 3.0% EDTA, and 21 about 0.0% to about 67.0% deionized water, wherein the percentages of components are 22 weight to weight of the fluid composition.

In a second preferred embodiment of the present invention, the serum of the fluid 1 2 composition is bovine calf serum. In this embodiment, the fungicide and/or herbicide of 3 the fluid composition comprises Sodium Azide. 4 In a third preferred embodiment of the present invention, the serum of the fluid 5 6 composition is bovine calf serum. In this embodiment, the fungicide and/or herbicide 7 solution of the fluid composition comprises Sodium Azide. In this embodiment, the fluid 8 composition further comprises a synthetic amino acid. It is preferred that the chelating 9 agent is EDTA. 10 11 The third embodiment further encompasses the fluid composition consisting essentially 12 of about 25.0% to about 99.8% bovine calf serum, about 0.1% to about 5.0% Sodium 13 Azide, about 0.1% to about 3.0% EDTA, and about 0.0% to about 67.0% deionized 14 water, wherein the percentages of components are weight to weight of the fluid 15 composition. 16 17 In a fourth preferred embodiment of the present invention, the serum of the fluid 18 composition is bovine calf serum. In this embodiment, the antibiotic solution of the fluid 19 composition comprises Patricin. 20 21 In a fifth preferred embodiment of the present invention, the serum of the fluid 22 composition is bovine calf serum. In this embodiment, the antibiotic solution of the fluid

composition comprises Patricin A. In this embodiment, the fluid composition further 1 comprises a chelating agent. It is preferred that the chelating agent is EDTA. 2 3 The fifth embodiment further encompasses the fluid composition consisting essentially of 4 5 about 25.0% to about 98.0% bovine calf serum, about 0.1% to about 5.0% Patricin 6 solution, about 0.1% to about 3.0% EDTA, and about 0.0% to about 67.0% deionized water, wherein the percentages of components are weight to weight of the fluid 7 composition. 8 9 10 It is envisioned that alternative chelating compounds such as Ethylene Glycol bis (2-11 Aminoethyl Ether)-N,N,N',N'-Tetraacetic Acid (EGTA) or the sodium salts of EDTA can be substituted freely for the chelating agent described above. Likewise, many antibiotic 12 13 and fungicide candidates exist which can be freely substituted for the described embodiments. Finally, the newborn calf serum can be replaced by serum from any 14 available mammal, a number of manufacturers/retailers are available to purchase serum 15 16 from alternatives such as horses, dogs, etc. The newborn calf serum can be replaced with 17 fetal calf serum with a higher overall cost to the production. 18 19 While this invention has been described with an emphasis upon preferred embodiments, it will be obvious to those of ordinary skill in the art that variations of the preferred 20 embodiments may be used and that it is intended that the invention may be practiced 21 otherwise than as specifically described herein. Accordingly, this invention includes all 22

1 modifications encompassed within the spirit and scope of the invention as defined by the 2 following claims. 3 **EXAMPLE 1:** 4 In this example, a solution is prepared for use in testing artificial hips. It is important to 5 6 be consistent in preparing the solution for each use as batch to batch variability may 7 impact test results. The following materials are used in preparing the artificial synovial fluid. Each 8 9 component is available from multiple commercial suppliers. Newborn Calf Serum 10 Patricin A 11 **EDTA** 12 Deionized water 13 Mixing cylinder (21) 14 15 Heating bath capable of reaching 50°C Magnetic stirrer and stir bar 16 Filter unit 0.22µm 17 Filter unit 0.45µm 18 19 The artificial synovial fluid is prepared as follows: 20 1. Pre-heat the frozen calf serum in water bath to 37-39°C 21 22 2. Fill mixing cylinder with amount of calf serum needed for the target volume according to the mixing ratios described herein 23 3. Add EDTA and Patricin A according to the mixing ratios described in Table 1. 24 25 4. Fill up the cylinder to the desired fluid amount 5. Mix the fluid (magnetic stirrer) for at least 15 min. 26 27 6. Filter the fluid first through the 0.22µm filter, then through the 0.45µm filter 28 7. Fill the fluid in squeeze bottle for use on simulator chambers

- 1 The fluid can be kept refrigerated for up to ten days.
- 2 300 ml of the fluid is then added to a Model HS2-12-1000, 12 Station Hip Simulator
- 3 (AMTI-Boston) to test wear on artificial hips according to experimental protocols. Fluid
- 4 is replaced in regular intervals of 1 to 3 days depending on the testing cycle.

Table 1. Mixing Ratios for Example 1

Final Vol [ml]	Serum [ml]	deionized water [ml]	EDTA [g]	Patricin [µg]
100	51.7	48.3	0.38	50
500	258.6	241.4	1.92	250
1000	517.2	482.8	3.85	500
2000	1034.5	965.5	7.70	1000

CLAIMS

10 I Claim:

- 1. A fluid composition used to simulate human synovial fluid in the 12 tribological analysis of artificial joints, wherein the fluid composition comprises a serum,
- an antibiotic or fungicide and/or herbicide solution, and water.
- 14 2. The fluid composition of Claim 1, wherein the serum is bovine calf serum.
- The fluid composition of Claim 1, wherein the fungicide and/or herbicide solution comprises Sodium Azide.
- 17 4. The fluid composition of Claim 1, wherein the antibiotic solution 18 comprises Patricin A.
 - 5. The fluid composition of Claim 1, further comprising a chelating agent.
- The fluid composition of Claim 5 wherein the chelating agent is a
- 21 synthetic amino acid.

1	7. The fluid composition of Claim 5, wherein the chelating agent is chosen
2	from the group comprising Ethylene-Diamine-Tetraacetic Acid (EDTA), disodium
3	EDTA, tetra sodium EDTA, and Ethylene Glycol bis (2-Aminoethyl Ether)-N,N,N',N'-
4	Tetraacetic Acid (EGTA).
5	8. A fluid composition, consisting essentially of:
6	about 25.0% to about 99.9% bovine calf serum;
7	about 0.1% to about 3.0% Ethylene-Diamine-Tetra-Acetate; and
8	about 0.0% to about 72.0% deionized water,
9	wherein the percentages of components are weight to weight of the fluid
10	composition.
11	9. A fluid composition, consisting essentially of:
12	about 25.0% to about 99.8% bovine calf serum;
13	about 0.1% to about 5.0% Sodium Azide solution;
14	about 0.1% to about 3.0% Ethylene-Diamine-Tetra-Acetate; and
15	about 0.0% to about 67.0% deionized water,
16	wherein the percentages of components are weight to weight of the fluid
17	composition.
18	10. A fluid composition, consisting essentially of:
19	about 25.0% to about 99.8% bovine calf serum;
20	about 0.1% to about 5.0% Patricin A solution;
21	about 0.1% to about 3.0% Ethylene-Diamine-Tetra-Acetate; and
22	about 0.0% to about 67.0% deionized water,

- wherein the percentages of components are weight to weight of the fluid
- 2 composition.
